Evidence-based preventie

Criminaliteitspreventie

The state of the field

Verklaringen

Gebrek aan formele training
Versnipperd beleid en verantwoordelijkheid
Divers personeelsbestand
Preventie zelf wordt in twijfel getrokken
Taalbarrière (Engels)

Attitudes vs praktijk

Praktijk

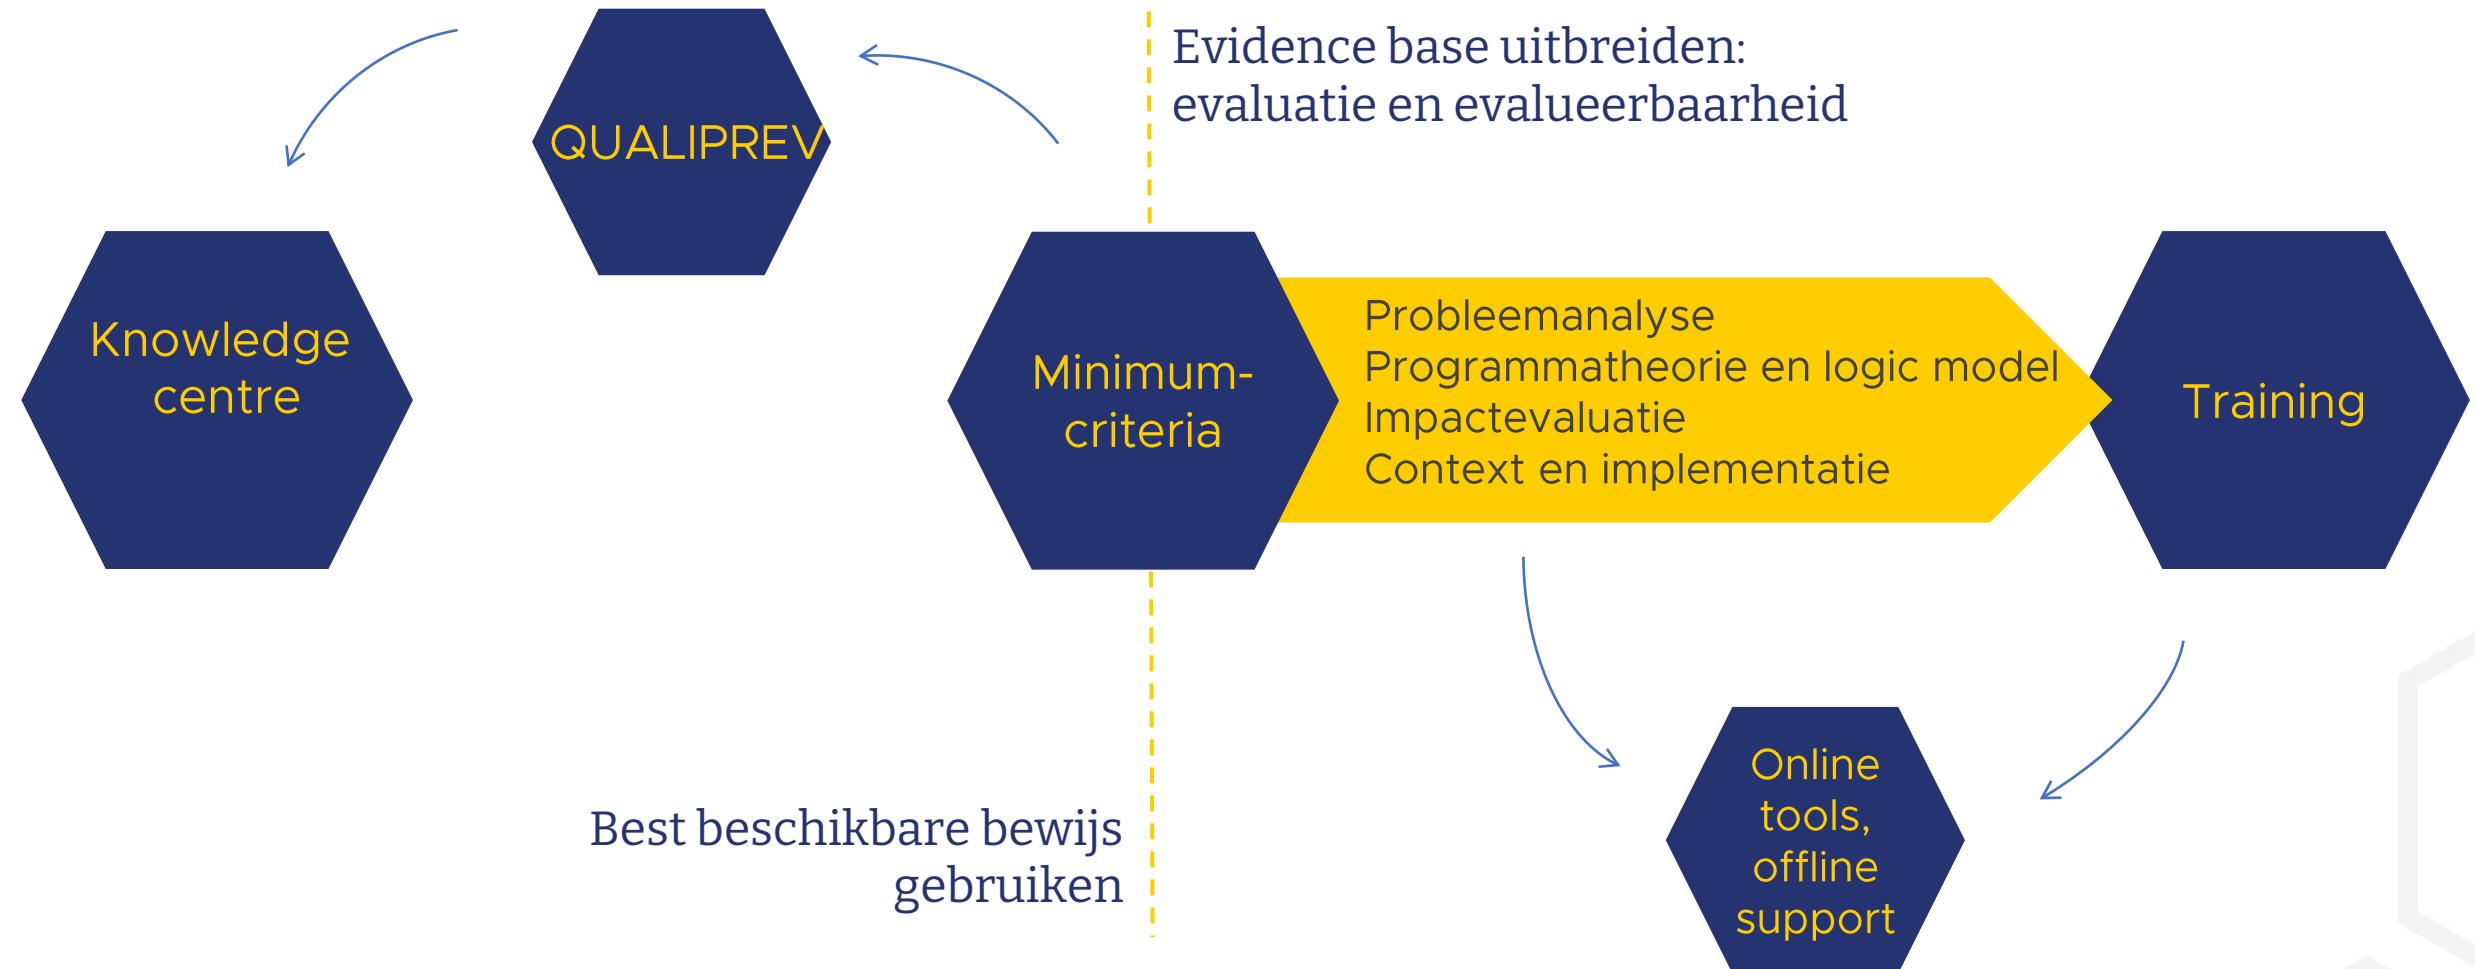

- Gecommitteerde evaluatiemogelijkheden
- Onvoldoende utilisatie van bewezen interventies
- Slechte programmatheorie
- Beperkte evaluatie

Attitudes

- Evaluatie is nuttig en nodig
- Evaluatie is moeilijk; expertise ontbreekt
- Evaluatie is middelen- en tijdsintensief
- Evaluatie kan ontmoedigend werken

Evidence-based strategy

Neighbourhood watch: buurtinformatienetwerken

CONCLUSION

The results of previous systematic reviews of neighborhood watch presented in the introduction were divided in terms of the conclusions drawn. Titus (1984) concluded that neighborhood watch was effective, but noted that the research methods used to investigate this were weak. Husain (1990) concluded that there was little evidence that neighborhood watch worked. Sherman and Eck (2002) concluded that neighborhood watch was ineffective in reducing crime.

The main findings of our *narrative review* were that just over half of the schemes evaluated (19) showed that neighborhood watch was effective in reducing crime, while only six yielded negative effects. The main finding of the *meta analysis* was that neighborhood watch was associated with a relative reduction in crime of between 16 and 26 per cent. The generally positive findings of the narrative review are consistent with the favorable effect found in the meta analysis. Hence, the dominant finding of our review, using both methods, is that neighborhood watch is effective in reducing crime.

Obstakels in burgerparticipatie

Werving

- Context-afhankelijk
- Actieve of passief
- Sterk kader

Organisationele obstakels

- Goed gedefinieerde rollen en posities
- Capabele eerste-lijnwerkers
- Bestuurs-ondersteuning

Gebrek aan training

- Training op maat
- Geschikte methode
- Continue training-momenten

Ongelijke vertegenwoordiging

- Sleutelfiguren
- Afwezigheid (minderheids-) groepen
- Toegankelijkheid

03

Bewustmakings- campagnes

Bewustmakingscampagnes in preventie

Preventie stoelt buitenproportioneel op bewustmaking

Bewustmaking is goedkoop, zichtbaar, makkelijk, snel

Nauwelijks bewijs voor effectiviteit

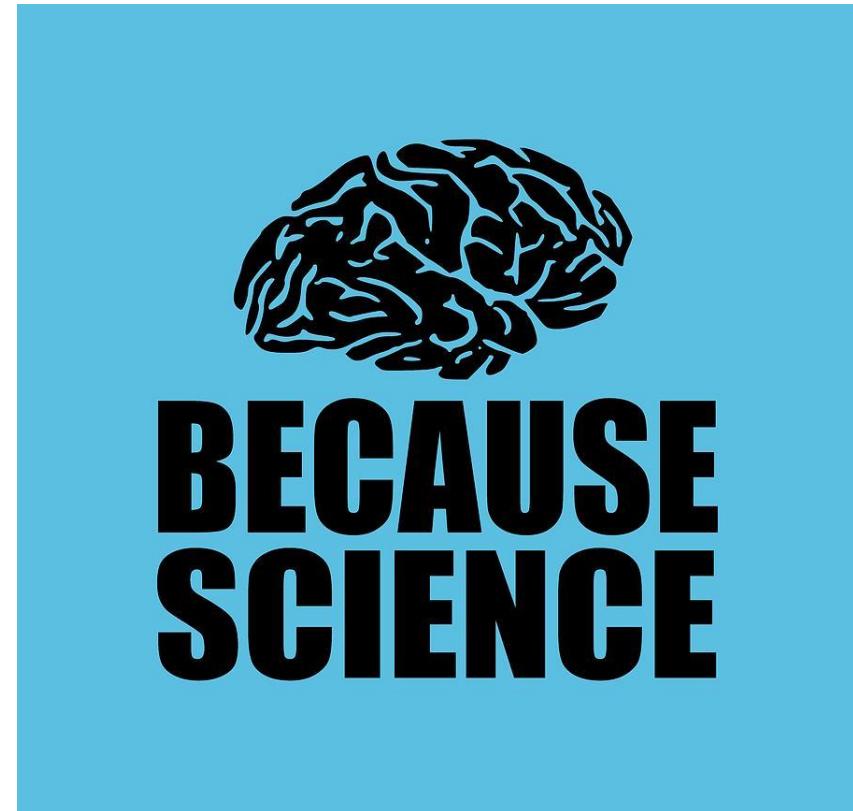

Waarom werken ze niet?

Geen bewustzijn gecreëerd

- Geen nieuwe informatie
- Doelgroep niet bereikt
- Onbetrouwbare boodschapper

Geen gedragsverandering:

- Gedrag wordt beïnvloed door emotie, subjectieve kennis, sociale normen, rolmodellen, gewoonte, planning, individuele psychologie, culturele overtuigingen
- Geen directe oproep tot actie

Waarom werken ze niet?

An exploratory study of cyber hygiene behaviors and knowledge

Understanding the Relationship between Human Behavior and Susceptibility to Cyber Attacks: A Data-Driven Approach

MICHAEL OVELGÖNNE, UMIACS, Univ. of Maryland,
TUDOR DUMITRAS, Dept. of Elect. Eng. and UMIST,
B. ADITYA PRAKASH, Dept. of Computer Science,
V. S. SUBRAHMANIAN, Dept. of Computer Science,
BENJAMIN WANG, Dept. of Computer Science, Virginia

Despite growing speculation about the role of human behavior in susceptibility to cyber attacks, no systematic, data-driven analysis and evidence have been lacking. Using a large-scale dataset consisting of 1.6 million machines over an 8-month period, we conducted an exploratory study of the relationship between human behavior and cyber attacks against their personal computers, workstations, servers, mobile devices, professionals, software developers, and others, plus a family of 7 features that act as proxies for human behavior. By combining the two datasets (1.6 million machines times 7 features), we studied the relationship between the two variables, namely the number of attempted malware

Interventions for Children, Youth, and Parents to Prevent and Reduce Cyber Abuse

Wat dan?

STOP
RAISING AWARENESS
ALREADY

Welcome to February
in America. You're no doubt aware that this is HIV/
AIDS awareness month and Teen Dating Violence

Month, Slavery and Human Trafficking Prevention Month, Volunteer Blood Donor Month, and Weight Loss Awareness Month all at the same

BY ANN CHRISTIANO
& ANNIE NEIMAND

Wat dan?

Bewustzijn verhogen

- Nieuwe informatie
- Doelgroepgericht/gesegmenteerd
- Betrouwbare boodschapper

Gedragsverandering

- Speel in op emotie en sociale normen. Maak de beste optie de gemakkelijkste. Gebruik rolmodellen
- Maak campagne onderdeel van bredere interventie
- Directe oproep tot actie

Gedragsverandering

Social marketing: “the systematic application of marketing, alongside other concepts and techniques, to achieve specific behavioural goals, for social good.” –Jeff French

Trends & issues
in crime and criminal justice
No. 381 September 2009

Foreword | This paper considers the potential application of social marketing principles to crime prevention. Social marketing has been a significant force in the public health field in Australia for more than two decades. It is a key component in the promotion of engagement in health protection behaviours, early detection programs and the promotion of individual health behaviour change. It is built on the
